How to Manage and Download Titles in Batches

⚠️ Under Construction

When you are managing a large project with dozens of titles, the Batch Downloader is a useful tool to help expedite your work. You can mark all the titles for download, run the downloader program on your computer, and then work on other priorities as all the titles download in a single batch!

You also have the option to Download a Single Title. This option only downloads one title at a time.

📝 This function is only available in the QA account.
